

# Sample Program 8.2

---

## About Void Functions

**Problem statement.** Write a void function named `me`, with no parameters, which prints your name to the console.

**Solution.**

```
static void me()
{
    System.out.println("your name");
}
```

---

**Problem statement.** Write a void function named `average`, with three double parameters, that prints to the console their average (including any fractional part).

**Solution.**

```
static void average (int a, int b, int c)
{
    int total = a + b + c;
    double average = total / 3.0;
    System.out.println(average);
}
```
